

Amendments to the Specification:

Please amend the paragraph at page 2, lines 4-12 as follows:

The electromagnet unit 100 is a plunger type electromagnet unit, and comprises a solenoid including a yoke 103, a ferromagnetic member 104, and a bobbin 102 supported by the yoke 103 and having a coil 101 wound thereon, and a plunger 105 being a movable iron core to be inserted into a hollow space ~~portion~~ portion of the bobbin 102, as shown in a cross sectional view of Fig. 20. The plunger 105 is urged by a coil spring 106 toward the direction of projection, and is sucked when the coil 101 is energized by a power source 107.
